DETAILED ACTION

Claim Objections

1. Claim 13 is objected to because of the following informalities:

Claim 13, line 1, please, insert "an apparatus" between --control node-- and -- for an automotive--.

Claims 1 and 13, please, change "adapted to be" to --being--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, line 9, it is unclear. The phrase of "control signal inputs adapted to be connected to said network" perform a function is not positive limitation or claim but only requires the ability to so perform. It does not constitute a limitation in any patentable sense.

Regarding claim 1, lines 12-13, it is unclear. The phrase of "power switches having input terminals adapted to be connected to the power control signal outputs" is not positive claim.

Regarding claim 1, lines 13-14, it is unclear. The phrase of "output terminals adapted to be connected to specific load devices" is not positive claim.

Regarding claim 1, lines 15-16, it is unclear. The phrase of "terminal connectors adapted to be connected to the control signal network" is not positive claim.

Regarding claim 13, lines 3-4, it is unclear. The phrase of "data signal inputs adapted to be connected to said network" is not positive claim.

Regarding claim 13, line 7, it is unclear. The phrase of "power terminals adapted to be connected to load devices" is not positive claim.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Isshiki et al., Chesnut et al., Stewart et al., Gabrisko, Jr. et al., and Fendt et al disclose related art.
